

Final Project Report

Subarna Kanti Samanta: MT2019523

Mohd Zahid Faiz: MT2019514

Abhishek Acharaya: MT2019005

Goal

- Classifying what a person is wearing: Formal Shirt/ T-shirt/ Saree/ Kurti

Working Links

- Instruction:
 - Copy the dataset and model folder to the google drive
 - mount the drive in that colab notebook and run all
- Final notebook:
 - https://colab.research.google.com/drive/1mnt8tjd6t4NxYBQO_XDIplq8_J31y0Bh?usp=sharing
- Classifier Notebook:
 - https://colab.research.google.com/drive/1FZjpdv0AXVUccw4sck-5_CxLYTF5ZKKJ?usp=sharing
- Detection Notebook:
 - https://colab.research.google.com/drive/1mak8zh3MnBB4Do0hJbpCfSgx_XIN8NmV?usp=sharing
- Model link:
 - https://drive.google.com/open?id=19_Wkq2mNIBDUX7-bUaCqYF0ymHRcYtwG
- Original Dataset:
 - <https://drive.google.com/drive/folders/1UcbKuhgrwACw8e6uppaEQn0YDjwjFG00?usp=sharing>
- Test Dataset:
 - https://drive.google.com/drive/folders/1Uv1oUYISi5_Vwn3a_Vv0zn3TnfygN5TU?usp=sharing

Approach

- It has 2 parts:
 - Detecting person in the image(Object Detection)
 - Classification of wearing(Image Classification)
- First step : Person Detection can be done by some pretrained models like YOLO/Faster RCNN
- The detected part can be trained for classification later.
- Pretrained YOLO V3 is used to detect person from dataset images
- Detected images(persons) are cropped out from the image for separate training.
- Our YOLO V3 model used, was pretrained on MS COCO dataset which have one class as person, which is used to detect person and get our region of interest

Architecture for Detection

Preparing Dataset

- Non availability of the labelled dataset was one of the biggest problem, we encountered.
- There are dataset that are having dress with labels.
 - deepfashion & deepfashion2
- The task requires ethnic wear which were not available
- To tackle this problem we made an image scrapper using selenium that will download images from the “google image search”
- Here we encountered another problem: images were of small size, less than (416,416) which is the default that Yolov3 accepts.
- We have modified the image scrapper code to extract high resolution images and images of smaller size are zero padded to make dataset diverse and rich.
- Preprocessing is done manually by us as dataset was not too large and we have to separate out outliers.
- Example of outliers:
 - Images of another category or none category miscategorized.
 - Unable to see clearly whether the person is wearing what.
 - Too much occlusion.
- After preprocessing of the images, they were passed through YOLO V3 to get Region of Interest separating only the persons in the images.

Classifier Training

- Detected persons were put in another dataframe along with their labels and the dress classifier was trained separately.
- We have planned to train a classifier for a bigger dataset like deepfashion2 and apply transfer learning, but due to time and resource constraints we switched to achieve best accuracy with our self made dataset, with smaller network and regularization.

Architecture of Classifier

Classifier Model layout

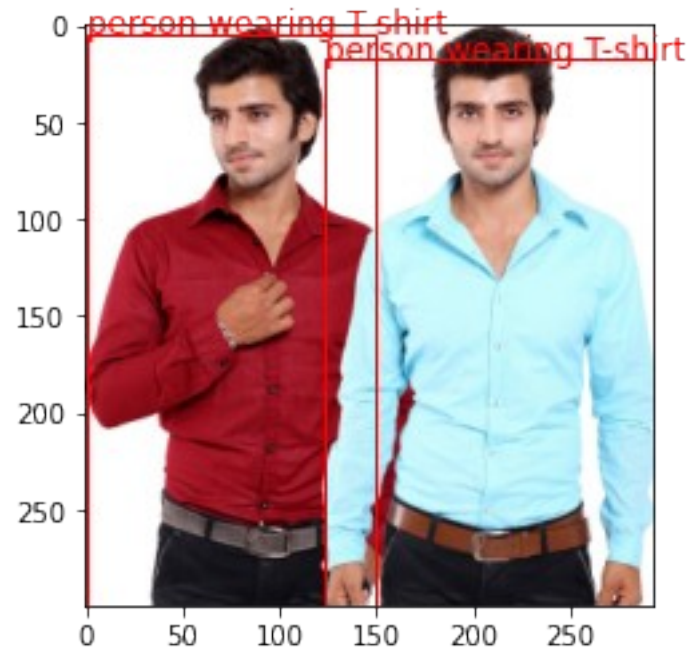

Classifier training graph

Results

- The accuracy of the classifier was improved on the validation set high as high as 80% which was able to achieve the decent results.
- For the test run, there was 100 images/class and the accuracy was 86.5%.
- The other observation was, that the classifier was working even if the multiple persons were in the image.
- It was able to distinct between T-shirt and formal shirt even if the dataset contained some incorrect labelled images.
- The occlusion below 20% was taken care of and the model was still able to classify.
- The model was able to classify correctly even if there was a posture or position change.
- Model was able to generalize well for two classes saree and kurti due to diverse nature of the dataset.
- It still was having difficulty in classifying T-shirts since they were in all kinds of varieties like with collar without it, full sleeve half sleeve, with buttons without them, jersey of football uniforms. This is still the region which can be worked upon by introducing more subclasses in this class.

Output Image Results

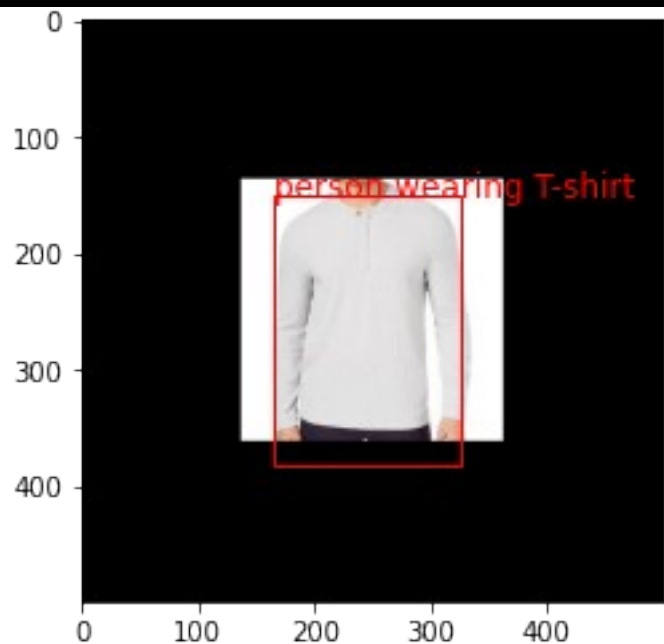

person wearing saree

person wearing T-shirt

person wearing T-shirt
